EXERCISE 2

I was not able to download the bento4 tools because I am using the Ubuntu machine. I tried by cloning the GitHub but it did not work. However, these are the following steps (commands) that I would write for obtaining the MPD file:

For fragmenting the video:

```
mp4fragment input_video.mp4 output_video.mp4
```

For encrypting and dashing I would use the same command since it does it at the same time:

```
mp4dash –encryption-
key=7cc7f0470019ac10d06bca13a580a9ff:5fa05f94e8cd09fc0747c7c5ac215b3b
```

The value for the `–encryption-key` flag is in the form `<base16 encoded key id>:< base16 encoded encryption key>`.

With this commands I would be able to create the MPD file for the input video.
